

# Hive Flutter Cheat Sheet

1. Add hive and hive\_flutter to the dependencies.
2. Import Hive.
3. Change main() to async and then:  
`await Hive.initFlutter();`
4. Open your boxes below the line of code you just added.  
`await Hive.openBox('appDataBox');`
5. You can make use of your boxes with this code. You can store the database in a final variable and use it the exact same way.  
`Hive.box('appDataBox')`
